U USABILITY LAB

RESEARCH REPORT · ROUND ONE

Forma checkout usability study.

Evaluating how confidently new customers can discover, configure, and purchase furniture through the Forma interactive prototype.

Study dates
May 12–15, 2026

Format
Moderated remote

Lead researcher
Alex Kim

01 · EXECUTIVE SUMMARY

Clear purchase flow. Unclear product details.

Participants moved confidently into checkout, but struggled to find the information needed to buy with confidence.

Three of five planned sessions are complete. Participants navigated from the homepage into the collection and checkout with relatively little friction, producing a 75% overall task completion rate and an average satisfaction score of 4.2 out of 5. The primary usability gap is not the purchase action itself—it is finding delivery and configuration information before committing to that purchase.

SATISFACTION

8
ISSUES LOGGED

> *“I assumed shipping would show up later. I didn’t see that line at all.”*

WHAT WORKED

Collection browsing, product imagery, cart review, and the visual simplicity of checkout all supported confident progress.

PRIORITY OPPORTUNITY

Make finish options and delivery timing explicit within the product information hierarchy before round two.

A focused, moderated study.

Objective

Can new customers confidently discover, configure, and purchase a product?

PARTICIPANT PROFILE

Five people aged 18–30 who shop online and match Forma’s target audience. Participants are anonymized as P1–P5.

SESSION FORMAT

20–30 minute moderated video calls using the interactive Figma prototype. Participants shared their screen and thought aloud while completing four neutral task scenarios.

SUCCESS CRITERIA

- ✓ 80%+ completion on each task
- ✓ 4.0+ average satisfaction
- ✓ Every issue has severity and a fix

Core task scenarios

01	**Find the Arc chair** Locate a comfortable reading chair from the homepage.	2 min	100%
02	**Choose a finish** Select a finish and identify the delivery estimate.	2 min	67%
03	**Complete a purchase** Continue through checkout to confirmation.	4 min	83%
04	**Find delivery information** Identify delivery and return policy information.	2 min	50%

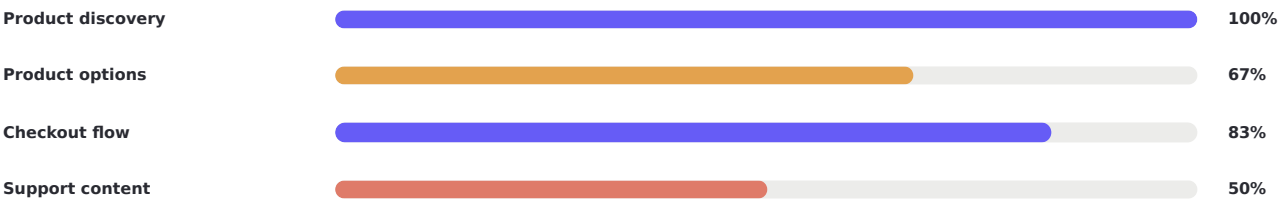

03 · RESULTS

Performance by task.

Results below reflect the first three completed sessions. The dashed benchmark for interpretation is an 80% completion rate.

TASK	COMPLETION	AVG. TIME	ERRORS	OUTCOME
01 · Product discovery	100%	0:42	0	Meets target
02 · Product options	67%	1:18	2	Below target
03 · Checkout flow	83%	2:46	1	Meets target
04 · Support content	50%	1:32	4	Priority

Completion overview

> *The highest error count appeared when participants actively searched for delivery and returns information.*

Three issues to address first.

Critical

01

Delivery details are too easy to miss

Three participants scanned the product page twice before noticing the delivery estimate beneath the primary action.

Proposed fix: Move delivery timing into a visible information row above the Add to cart button.

Major

02

Finish swatches need visible labels

Two participants selected finishes by guessing from color alone and missed that a name appeared elsewhere on the page.

Proposed fix: Add persistent labels beneath each swatch and strengthen the active state.

Minor

03

Cart removal action feels detached

One participant expected the remove action to appear beside the quantity control rather than on the opposite side.

Proposed fix: Place Remove beside the quantity selector and increase its tap target.

05 · RECOMMENDATIONS

Prioritized design changes.

The first two recommendations should be implemented before the remaining sessions if the study protocol allows, or validated together in a second round.

01 **Elevate delivery timing** — High impact

Replace the low-contrast microcopy with a structured delivery row beside finish and pricing information.

02 **Label every finish option** — High impact

Show Cognac, Forest, and Natural beneath their swatches at all times, not only after selection.

03 **Clarify support navigation** — Medium

Add delivery and returns links to the main footer and surface concise policy content in the cart.

04 **Group cart controls** — Low effort

Keep quantity and remove actions together to match users' existing mental models.

> *Next step: complete sessions P4 and P5, update the priority screens, then run a focused round-two validation with three participants.*

Context for interpretation.

Limitations

This is an early directional study with a small sample. Three of five sessions are complete, so percentages may shift. The Figma prototype does not reproduce every production behavior, and participants knew they were completing test tasks.

Ethics & quality

- ✓ Informed consent recorded
- ✓ Participants anonymized
- ✓ Same script used in each session
- ✓ Metrics logged within 24 hours

Participant tracker

ID	PROFILE	DEVICE	DATE	STATUS	RATING
P1	Design student	Laptop	May 12	Complete	4.2 / 5
P2	Graduate student	Laptop	May 12	Complete	4.6 / 5
P3	Junior architect	Mobile	May 13	Complete	3.8 / 5
